The Outside Clinic offer a range of 'Daylight Lamps' as well as magnifiers.

In 1990, Patrick Jacquelin discovered the daylight bulb on a trip abroad. Recognizing that natural daylight is the healthiest and most comfortable light for our eyes, he realised that this 'daylight simulation effect' could benefit thousands of individuals who need natural light for everyday tasks and hobbies that involved intricate detail and colour matching. From this The Daylight Company was created. Since then, the company has steadily grown and today they are the market-leading brand of speciality lighting technology for the hobby industry across Europe and also work alongside charities like the RNIB to develop new products for people with visual impairment.

Magnifiers

Brilliant Solutions...

for everyone

Lighting and Low
Vision Aids

Lighting and Low Vision Aids

Following many years of experience within the field of Vision Care, both as a provider of spectacles and Low Vision Aids, we have been able to bring together a comprehensive range of aids and equipment designed not only for people with a visual impairment but also to aid people with their day to day tasks, when their vision is not quite what it used to be.

Our product portfolio now represents a range of quality products, together with a cost-effective pricing policy. We can provide Low Vision Aids from the simplest magnifying glass to a more sophisticated Video Magnifier.

The Outside Clinic can provide a no obligation service, if you would like to find out more about which type of magnifier might be best for you. This service is backed by our usual no quibble refund policy on returns and all the other benefits of our loyalty card programmes.
